Business Transformation & Readiness | Supply Chain Implementation

Operations and systems-implementation builder bridging frontline fulfillment experience with end-to-end delivery of business operations platforms across booking, scheduling, finance, and tax workflows.

Bridge the gap between how teams work today and where they need to be, leading end-to-end solution delivery from discovery through launch — cutting complexity, challenging assumptions, and streamlining repeatable processes to accelerate timelines.

WORK EXPERIENCE

Independent Business Systems Developer

2023 – Present

- Run full-cycle implementations of booking, scheduling, finance, employee, and tax workflows for small-business clients; gather requirements directly from owners and translate current-state operations into future-state system capabilities.
- Document process flows, weigh fit-to-standard against custom configuration, and run UAT against validated business requirements before release.
- Build secure backends in Supabase and PostgreSQL with Row Level Security, OAuth, and real-time subscriptions to handle multi-tenant customer, employee, and financial data.
- Stand up CI/CD on Vercel with Vitest and Playwright integration tests; ship the Picasso Hair Salon platform with 90% core-module coverage and stable production releases.
- Integrate Claude-based agents and MCP tooling to standardize implementation documentation, shorten review cycles, and create reusable handoff files that let new collaborators reproduce builds with minimal ramp-up.

Amazon

San Bernardino, CA

Warehouse Associate—Operations Point of Contact

Feb 2022 – Jul 2023

- Selected within three weeks as Point of Contact for ~30 associates across robotic induction stations and conveyor flow in a high-volume fulfillment operation.
- Increased induction throughput ~15% by tracking station volume in real time and tightening floor-to-manager communication; maintained consistent hitting of 4-5 hour inbound inventory target.
- Reduced early-shift attrition 25% by reinforcing teamwork, peer accountability, and clearer line communication.
- Identified bottlenecks in induction and escalation flow; supported live process changes during operations and escalated robotic mover issues to maintenance to protect throughput.

Costco Wholesale

Rancho Cucamonga, CA

Seasonal Merchandise Associate

Oct 2025 – Jan 2026

- Covered merchandise, customer assistance, and store workflow during peak holiday season; cross-trained across functions to flex with volume.
- Delivered consistent, high-touch customer engagement at checkout and on the floor — proactively resolving questions, anticipating needs, and ensuring a positive end-to-end service experience aligned with Costco's member-first standards.

SKILLS

Transformation & Delivery:

Requirements gathering · Current → future-state workflow design · Fit-to-standard vs. custom · UAT · Process improvement · Stakeholder communication · Bottleneck analysis · Change adoption · Secure data handling

Productivity & Collaboration:

Microsoft Excel · Word · PowerPoint · Outlook · Teams · SharePoint · Linear · Notion · Figma · GitHub · Slack

Systems & Data:

PostgreSQL · Supabase · Row Level Security · OAuth · Real-time subscriptions · CI/CD (Vercel, GitHub) · Vitest · Playwright · Docker · AWS · Azure · Ubuntu · ArchLinux

Analytics:

Python · R · SQL · EDA · PCA · CCA · SEM · TensorFlow · PyTorch

Languages & Frameworks:

TypeScript · JavaScript · Svelte 5 · React · Next.js · TailwindCSS · Django · Flask · Java · C/C++ · Go

AI Tooling:

Claude · ChatGPT · Gemini · Copilot · Autonomous orchestration · Claude Code · MCP integration · Agent workflow design · Cursor · Prompt engineering

PROJECTS

Fleuron

Salon & Small-Business Management Platform 2025 – Present

- Extended Picasso's core booking system into a multi-tenant SaaS pattern with boutique per-business sites, finance tracking, tax-deduction support, and employee management; Mapped feature-parity gaps against market-leading platforms to prioritize roadmap items.

Quantasy

Fantasy-Sports Management Platform May 2025 – Present

- Founder-led platform in alpha with ~40 testers; designed core data model and UX for roster management, synthesized user feedback to drive iterative roadmap refinement.

Picasso Hair Salon

Booking & Operations Platform Jun 2025 – Present

- Production multi-step scheduling, customer portal, and admin dashboard for end-to-end service management.
- Supabase backend with RLS and OAuth, Test-driven development via Vitest and Playwright (90% core coverage), Vercel CI/CD, internationalized in English, Spanish, and Chinese.

Grizzly Getaway

Short-Term Rental Booking & Tax Management Jun 2025 – Present

- Live booking, availability, and tax-tracking platform supporting an operating cabin-rental business; integrated back-office workflows for deduction tracking.

UC Davis DataLab

Longitudinal Health Data Analysis Apr – Jun 2025

- Analyzed 43,800 records across 218 subjects using EDA, PCA, CCA, and SEM in Python and R. Built a Python web app and HTML reference guide so non-statisticians could contribute across the analysis pipeline. Findings presented to DataLab researchers.

Cafepillar

Team Game Project (5-Person, Godot) Sep 2024 – Mar 2025

- Implemented scalable game-state and data-management systems enabling 15 new recipes to be added without code rewrites; reduced feature build time ~30% via OOP patterns (Factory, Observer, Command).
- Optimized A* pathfinding (~80% reduction in computational overhead) and resolved 100+ Git merge conflicts across a five-person team repository.

EDUCATION

B.S. Computer Science

University of California, Davis

Relevant coursework:

- Data Structures
- Algorithm Design & Analysis
- Artificial Intelligence
- Non-STEM Data Analysis Applications
